the Microsoft Office 365 for Mac app, you must log in to the Microsoft Account you use to sign in to Office 365 and the Mac app..HMS Cersey HMS Cersey was an Admiralty Harland & Wolff destroyer, launched in 1943. She served in the Royal Navy (RN) in the Second World War. History The ship was built for the RN and launched on 26 April 1943. In January 1943 Cersey was towed to the Clyde and placed in reserve. In October 1944 Cersey was allocated to the Admiralty for service in the Mediterranean. She was returned to the RN in June 1946 and placed in reserve. Cersey was sold to the Metal Industries for scrapping in 1966. References Category:Ships built in Belfast Category:1943 ships Category:Town-class destroyers (1941) of the Royal NavyQ: How to retrieve form input value when submit button is pressed, in Angular2? I have to submit a form to a web api, using Http.post, and it will call this method in a service: @Post("/api/add") public Set updateForm(String name,

Category: Microsoft toolsQ: Output of tensorflow 2 custom loss function I'm trying to train my self-made model using tf 2. But I was confused with the output of loss function. I set up a custom loss function as following:

```
import keras
import tensorflow as tf
import numpy as np
x_train = np.random.random((100, 6, 32, 10))
y_train = np.random.random_integers(1, 5, size=100).reshape((100, 5))
x_val = np.random.random((10, 6, 32, 10))
y_val = np.random.random_integers(1, 5, size=10).reshape((10, 5))
tf.keras.Model(inputs=[x_train, x_val], outputs=[x_train, y_train, x_val, y_val])
model = tf.keras.Model(inputs=x_train,
```

---

```
outputs=y_train, loss=keras.losses.my_custom_loss(x_train=y_train, x_val=y_val))
model.compile(optimizer="adam",
loss=[keras.losses.my_custom_loss, keras.losses.sparse_categorical_crossentropy])
model.fit(x_train, y_train, epochs=100, verbose=2) And I got the output as:
```
